Digital VS Analogical in Dental Medicine

Faculty of Medical Sciences at the University “GoceDelcev” in Stip gladly invites you to participate in First International Students Congress where we will be able together to invest in the future of modern dentistry.

This Congress is a great opportunity to learn new techniques in dental treatment, to spend quality time with colleagues, to enjoy in the beautiful scenery of the Macedonian pearl- our city of Stip!

Enjoy!

Stip, Republic of Macedonia -28.03.-29.03.2018

Theme 18	Oral hygiene maintenance in patients with denture Author: <u>Sara Talevska</u> , Co-author: Zorka Gjorgieva Mentor: Verica Toneva ; Co- mentor: Darko Kocovski

14:00-17:00

HANDS ON COURSES

Одржување на орална хигиена во домашни услови
(Доц. Др. Сања Нашкова и Др. Верица Тонева)

Универзитет „Гоце Делчев“ - Штип
Факултет за медицински науки
Дентална Медицина

Digital vs Analogical in Dental Medicine

Теоретски дел:

- Основни и дополнителни средства за одржување на орална хигиена
- Избор, избор и одржување на четки за заби
- Техники на одржување на орална хигиена
- Придонес од одржување на орална хигиена

Практичен дел:

- Приказ на средства за одржување на орална хигиена
- Демонстрирање на техники на четкање на заби
- Демонстрирање на дополнителни средства за одржување на орална хигиена
- Сумирање на предностите од користење орално-хигиенските средства

Максимум: 8 учесници
Место: Сала 1 (фантомска сала-сала за претклиника)
Датум: 29.03.2018
Време: 14 - 17 часот (1 час: 45 мин. теоретски дел, пауза: 15 мин. 2 часа: 2x 45 мин. практичен дел)
Контакт меил: verica_toneva@hotmail.com

Препарација на заби за безметални надоместоци – коронки и фасети
(Доц. Др. Катерина Златановска, Др. Дарко Кочовски и Др. Сандра Атанасова)

Универзитет „Гоце Делчев“ - Штип
Факултет за Медицински Науки
Дентална Медицина

Digital vs Analogical in Dental Medicine

Теоретски дел 1-1.5 час:

- ввод во безметалните системи – поделба, индикации и практична примена
- препарација на зобите за безметални коронки и фасети
- принципи на цементирање на безметалните реставрации – избор на цемент, специфичности на припрема на заб и на безметалниот надоместок

Практичен дел 2 час:

- препарација на три таба (централен иницијал, премолар и молар)

Место: Сала 1 (фантомска сала-сала за претклиника)
Датум: 28.03.2018
Време: 14-17 часот

Digital vs Analogical in Dental Medicine

Introduction:
The paramount goal of soft tissue surgery is closure of wound flaps, in the absence of tension on the flaps, which will lead to optimal wound healing.
Oral surgical procedures that require flap manipulation such as those used with traditional oral surgery procedures, dental implantation, periodontal therapy, hard and soft tissue regeneration, and the excision of pathologic tissue require excellence in execution and a thorough understanding of the various techniques of surgery, suturing and the materials currently available to ensure the desired clinical results.

Program (group of maximal 15 students):
14.00 - 14.30 lecture of oral surgery armamentarium for oral surgery incision, flap design and suturing (needles, suturing materials and knots).
14.30 - 16.00 Workshop
Demonstration of suturing technique: simple loop, interrupted suture, horizontal and vertical mattress suture.
16.00 - 16.10 Certifications
Contact mail: sonjarogoleva@gmail.com

Техники на апликација на гутаперка
(Проф. Др. Ивона Ковачевска, Доц. Др. Наташа Денкова, Др. Сандра Атанасова, Др. Верица Тонева)

Универзитет „Гоце Делчев“ - Штип
Факултет за Медицински Науки
Дентална Медицина

Digital vs Analogical in Dental Medicine

Теоретски дел (1 час):

- Подготовка за ендодонтиски третман
- Инструменти за препарација на коренски канали
- Техники и цели на канално ширење
- Методи на ширење на коренски канали
- Оптурација на коренски канали

Практичен дел (2 часа):

- Демонстрација на оптурација на коренски канали на следните техники (Гуттаперча кондензација, Thermafil и GuttaFlow техника)
- Практично изведување на модели
- Евалуација на обуката

Максимален број на учесници: 10 студенти.
Место: Ординација 4

The beneficial effects of the PRF membranes in a clinical setting

Abstract

Platelet-rich plasma (PRP) and platelet-rich fibrin (PRF) are autologous platelet concentrates prepared from patient's own blood. Contemporary dentistry is focused on the development of alternatives that might result in the local release of growth factors accelerating tissue healing. However, the plasma content and preservation of platelets depends on the compression methods used. To accurately evaluate the clinical outcome of PRF, the preparation protocol should be standardized.

Platelet-rich plasma (PRP) is a platelet-rich fraction of plasma and is clinically available as a source of growth factors to facilitate tissue repair and regeneration. To improve the handling efficiency, the retention at application sites, and the release of growth factors, bovine thrombin and/or calcium have been preferentially added to PRP to directly or indirectly facilitate the conversion from fibrinogen to fibrin.

In the field of dental medicine, there are three major applications of PRF preparations. These applications include 1) biodegradable barrier membranes for guided tissue regeneration, including alveolar ridge augmentation, 2) a reservoir of growth factors as a gel form of PRP for tissue regeneration, such as bone induction and 3) biodegradable scaffolds for tissue engineering.

For the standardization of PRF preparations as a grafting material, the use of the region of the PRF membrane with the greatest platelet enrichment is proposed and not to squeeze out all of the plasma contained in the original PRF clots. In this regard, the novel compression device would be useful for preparation of biologically active PRF.
